NURUGO MiCRO : JEWELLER

www.nurugo.com
Discovery begins Nurugo Micro

Special-order jewelry is the making of one of a kind items, and is not too different from model making. This process, like model making, can be fairly simple Wax Carving to be cast into metal, or it can involve very complex fabrication skills building the piece out of the actual metal using a wide variety of skills and tools. Very often both model making and special order involve gemstones, and thus the pieces must be designed and made to properly hold those. You know that magnification is essential for creating good work. Nurugo Micro carries a wide variety of magnifying supplies for all sorts of jewelry professionals.

NURUGO MiCRO : WATCHMAKER

www.nurugo.com
Discovery begins Nurugo Micro

"A watch is so tiny, just a little thing. You have to look under a loupe to see everything. It's like a little world of its own with a heart of its own," Watchmaker said.

Perhaps the most important tool for a watch collector is a good loupe. Whether one collects vintage or modern watches, Nurugo Micro is essential for magnifying important and subtle details that allow a collector to:

- Accurately assess the condition of a prospective watch
- Scrutinize dial, case, and movement details to detect counterfeit, modified, or incorrect parts

NURUGO MICRO : PHOTOGRAPHER

www.nurugo.com
Discovery begins Nurugo Micro

As a still photographer, you're probably used to squinting into the small viewfinder for hours on end. The proper use of a viewfinder lets you accurately compose a shot. Most viewfinders also offer useful overlays to judge exposure and provide other technical information about the shot you're about to take.

Unfortunately, when shooting video on your DSLR, the viewfinder stops working because the camera's mirror must stay up when capturing video. A good LCD can go a long way, but the addition of one critical piece of Nurugo Micro can dramatically improve your ability to judge focus and exposure.

Nurugo Micro typically enlarge the image two to three times, making it much easier to see critical focus. Nurugo Micro helps you see just how much of your shot is (or is not) in focus.

NURUGO MiCRO : PRINTER

www.nurugo.com
Discovery begins Nurugo Micro

Spend any time in a printshop and you'll quickly discover that press operators, and even print buyers, depend on their loupes to help inform them about the quality of plates, proofs, and presswork.

Beside each type of loupe/microscope is an image to approximate the view through that instrument. Keep in mind that all loupes and microscopes have limitations based on the laws of optics and that prices can vary widely. That is why having more than one instrument is usually best. In general the higher the magnification the smaller the field of view, the shallower the depth of view, and the closer the instrument must be to the subject. A single lens is satisfactory for low power loupes but higher power ones require two or more lens elements for improved resolution and correction of chromatic aberrations, distortion, and improved flatness of field

NURUGO MiCRO : COLLECTOR

www.nurugo.com
Discovery begins Nurugo Micro

Too often collectors will attempt to use a magnifier with too much magnification, or worse, a magnifier with poor quality lenses.

This short article should give you a few tips as to what is best for your needs. The first place to start is with quality. Without any doubt, the best magnifier to use is a Nurugo Micro. Nurugo Micro reduce distortion around the edge of the opening. Have you ever used a cheap glass and found only the very center of the opening is useable? Nurugo Micro will allow the entire diameter of the lens to be used in viewing the coin.

NURUGO MiCRO : BIOLOGER

www.nurugo.com
Discovery begins Nurugo Micro

NURUGO MICRO: I'm a final year biological sciences student, hopefully moving on to PhD studies soon. The simple convenience the nurugo micro would offer in being able to perform simple experiments is second to none. Not only this, but I'll be able to use it when demonstrating to younger potential scientists, and hopefully be able to peak their interest, helping create the next generation of biologists!

NURUGO MiCRO : GEOLOGER

www.nurugo.com
Discovery begins Nurugo Micro

Nurugo Micro is an awesome tool for my outreach events, allowing to discover the world of micro fossils without me having to lug around a microscope. Not to mention the benefit of having this available to visiting researchers and day-to-day operations of the collection.
